

STATE-OF-THE-ART PAINT REMOVAL / RUST REMOVAL COATING REMOVAL

100% Recycled Crushed Glass Media Blasting

State-of-the-Art Crushed Glass is the Best Abrasive Blast Media – Delivering Superior Overall Performance compared to all other abrasive blasting media

Don't settle for anything less than the best!

Delivers a NATURAL, WHITER metal finish that other sandblasting / sodablasting abrasives.

SIGNIFICANTLY LESS embedment issues—up to 5 times less than other media.

GENTLE - lightweight enough to clean surfaces without warping or damaging underlying material.

The angular structure of crushed glass media promotes FASTER and more AGGRESSIVE surface profiling and removal of epoxy, alkyds, oil, paint, coal tar, vinyl, polyurea, body filler, and elastomers.

Continued on next page

DOES NOT leave an oily or caustic (soda) residue after blasting, making surface preparation before painting less costly and time consuming.

Can clean aluminum, brass, copper and stainless steel WITHOUT warping, excessive profiling, or surface damage.

Similar hardness to many slags, 6.0 on Mohs Scale.

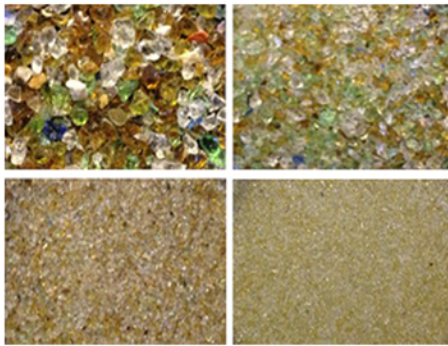

Chemically NEUTRAL. Does not contain impurities that will accelerate rusting of blasted surfaces. This will slow the time it takes for a blasted surface to begin rusting and extend the allowable time between blasting and painting.

Directly helps reduce landfill waste and limits the use of more toxic slags.

It can be used near and around water.

SUPERIOR OVERALL PERFORMANCE compared to all other blasting media.
